

DOUBLE PILOT OPERATED CHECK VALVES WITH MANUAL SHUT-OFF

VBPDE c/RUB.

Flow Upto 50 LPM
Pressure 350 Bar

Description & Operation

Pilot check valves with integrated manual shut-off used to block the actuator in both directions. Flow is free in one direction and blocked in the reverse direction until pilot pressure is applied. Due to the high safety of these valves they are particularly suitable for fitting onto the stabiliser cylinders: closing of the manual shut-off valve, after the lowering of the stabiliser legs, would prevent any potential accidental movements. Connect V1 and V2 to the pressure flow and C1 and C2 to the actuator.

Technical Data

Maximum Flow	50 LPM
Maximum Pressure	350 Bar
Body Material	Steel
Internal Material	Hardened and Ground steel
External Component treatment	Zn/Fe - standard (96h) / Zn/Ni (720h)
Oil Temperature	50 Deg. C
Fluids	Mineral based or synthetics with lubricating properties
Viscosity	30 cSt
Standard Sealing	NBR-Buna N
Filtration	20/18/15 ISO 4406 (Max. Filtration admitted)
Orientation / Mounting	Inline
Weight	See Ordering details
